

Scangrip UV-Pen

A rechargeable LED UV flashlight designed for spot repair and fast curing of car door edges and other narrow areas. The housing of the compact high-quality UV curing light is made from durable aluminium providing an ergonomic grip for a firm hold. With the built-in clip for the chest pocket the flashlight is easy to carry around and always near at hand. No heat is produced on the panel or the paint during the curing, allowing curing of plastic parts or any heat sensitive material. The UV-PEN is supplied with a solvent resistant, exchangeable glass lens and the lamp can easily be charged with the enclosed USB cable.

Additional Information

- Fast curing process (only 1 min).
- The compact design allows curing in the most inaccessible places.
- The built-in clip makes it easy to carry around the lamp.
- No heat is produced on the panel or the paint during the curing, allowing curing of plastic parts or any heat sensitive material.
- Equipped with an exchangeable solvent resistant glass lens. UV protective glasses recommended to be worn during use, please see Part No. 03.5759.
