

Nitrogen Plastic Welder with Generator

Plastic welder with its own Nitrogen generator, that eliminates the need for a nitrogen gas bottle. Workshop compressed air is used to maintain consistent temperature between welds — the nitrogen is only activated when pulling the trigger so that it's not wasted between welds. Makes repairs that are stronger than any two-part epoxy or hot air weld. The plastics are melted together, with no oxidation, to form the strongest possible weld.

Additional Information

- Compatible with almost every plastic type used in the automotive industry.
- Has its own nitrogen generator which eliminates the need for a gas bottle.
- Allows the welding of filler material by heating with nitrogen.
- The welder comes complete with a set of plastic consumables including a scraper & roller to finalise the repair, together with a reusable trigger spray water bottle for panel preparation.
- Heats plastic without combustion & therefore without emitting fumes: 230v, 50Hz, 1600w, 20-650°C. Made in Italy.
